

Additional Information

I am Garry Sandhu, a Civil Engineer and working with local government, I understand the role of Council decisions in our lives. My vision is to improve the living standards of residents by enhancing access to high-quality sporting facilities, recreation parks, libraries, and bicycle paths. I will work to save the environment by analyzing and revising the policies to support sustainable developments that have lower ecological footprints and value for money. Originally from India and living in the City of Gosnells with my family since 2008, I believe Council can do more for happiness of our seniors and youth. I will champion initiatives that connect these two groups, promoting mutual benefits and better mental health for all. I support the Principal Shared Paths to improve connectivity to train stations. More importantly, I will be your voice in Council to get positive outcomes. I ask for your vote and support in elections and collectively we can bring great benefits to our community.
